

CRC DIYS

RP equipment specifically designed for horizontal measurement. The CRC DIYS has been designed and manufactured in order to detect and differentiate internal radioactive contamination with great precision. In addition to that, its mobile detector block is ideal for performing specific measurements on personnel's body and in-depth analysis. Due to its complete analysis software, it is capable of identifying and quantifying radioisotopes in a wide energy range.

SPECIFICATION

- 1 NaI detector (additional NaI or HPGe detectors can be installed)
- Customizable scan speed
- Temperature: 0°C - 50°C
- Software 100% customizable
- Gamma emitters can be tracked
- Lead shielding of 100 mm for the detector and 50 mm for the rest of the equipment
- Humidity max: 90% noncond
