** As model RA631 consists of two pieces, the following applies:
 For the vest, the larger value of the chest and waist determines the size.
 For the skirt, the larger value of the waist and hip determines the size.*

Back relief

The elastic insert in the back of the skirt makes it easier for users to maintain their posture in daily routines.

Free movement

For greater freedom of movement, the skirt has a cut-out at the back.

Of course, the knees are still optimally protected at the front and sides.

Overlapping area

In order to ensure protection during movement (e.g. when bending over), the vest has sufficient length and it overlaps the skirt.

Elastic insert

The insert in the rear of the skirt makes it easy for the user to hold their posture and this can be easily replaced if necessary, thanks to a zip.

High-quality hook-and-loop fasteners to close the vest and skirt are, of course, standard.

Patented safety

Ideal radiation protection is provided by colour-contrasting (Titan) safety zones on the sides and in the shoulder area. These are equipped with the full lead equivalent value of the front part and give you the certainty of being optimally protected in all situations.

If the front wing is within this clearly recognisable zone when the protective clothing is fastened, you are covering the full 60% of the girth with the selected protective value.
