Shields

MAVIC X-Ray Protective Shields

The lead acrylic radiation protective shields have a lead equivalent of Pb 0.50 mm. The high transmittance of our shields ensures the best visibility, offering extremely low risk of injury for staff and patients thanks to the rounded corners and edges, as well as the shatter-proof material.

In an emergency, the shield can be moved out of the way quickly and easily

- ▶ High transmittance for best visibility
- ▶ Rounded corners and edges, as well as the shatter-proof material for low risk of injury
- ▶ Safety lock, easy-to-guide handle and a specially designed MAVIG connection element provide great agility and additional safety

Easy and Simple Operation for Safe Radiation Protection

You will find the whole range of MAVIG radiation protection shields [here](#).
